

THE WORLD'S MOST ADVANCED SECURITY MANAGEMENT SYSTEM

DEVELOPED BY KEYTECH SECURITY SOLUTIONS LIMITED

A LOOK AT THE WORLD'S CURRENT SECURITY SITUATION

↳ THE SECURITY INDUSTRY

Throughout past decades the security industry has struggled in dealing with a number of security management issues. Among these issues include poor security networking, primitive screening processes and inefficient data retrieval. The industry has suffered from disorganization through cluttered paper documents and lack of established protocol. Furthermore, the world itself has witnessed an undeniable increase in security threats and breaches on government entities and organizations. With the occurrence of recent events, society has undoubtedly experienced one of the most hectic decades in history. Security organizations ensure the public that future resolutions are near, yet as time passes, average security budgets continue to decrease and security systems remain outdated. The industry has been forced to settle with mediocre security management systems that offer basic functionality, disastrous paper records and minimal practicality. Being the case, security organizations made the most of what they had, however were in desperate need for a unifying solution that would ultimately strengthen the security sector. The need for a comprehensive security management system was crucial.

A GLOBAL SECURITY MANAGEMENT SOLUTION

↳ OUR RESPONSE

In response to global security threats and security management difficulties, Keytech Security Solutions undertook a path of extensive research and development to build an integrated and profound security management solution. Through a combination of brilliant ideas, innovative concepts and advanced technology, Keytech's Security Management Solution (**SM**) was at last created. Remarkably unique while functioning in a sophisticated and intelligent manner, the solution features numerous, highly capable applications and distinctive report features that work together to unify security procedures. **SM** not only defeats outdated processes, but completely reduces the error-margin through its mathematical execution. It was all due to the ingenious creativity of one man and his vision of revolutionizing the way the security industry operated and shared data. With over 20 years of security industry experience, Firas Sinno, the CEO and Founder of Keytech Security Solutions chose to abandon outdated security procedures and establish a higher standard within the field. Today, **SM** connects entities together, shares and protects data, minimizes risks and increases efficiency and precision. It is the revolutionizing solution the security industry has been desperately waiting for.

OPERATE AT MAXIMUM EFFICIENCY

KeyTech

THE LONG AWAITED GLOBAL SECURITY SOLUTION

SMS intends to connect and unify authority and security organizations by providing a smarter all-in-one system with unlimited capabilities. By bridging the gaps and connecting workforces to their information, our system will increase efficiency and productivity within government entities, security organizations and facility management companies.

↑ Trending Up

Data Availability

SMS makes critical data available online and offline and backs up all information on dedicated and secure servers.

Lawsuit Protection

SMS's powerful modules and reporting features allow users to collect comprehensive records of events through documents, signatures and images.

Technological Advancement

SMS incorporates the latest technologies such as biometrics and touch compatibility, guaranteeing security procedures are executed precisely and up to standard.

Workforce Efficiency

SMS reduces administrative tasks considerably by eliminating time consuming manual procedures. This allows users to quickly view, gather and store necessary data.

↓ Trending Down

Operational Costs

SMS reduces costs by giving users an all-in-one security management system. Furthermore, the need for paper records and documents is eliminated.

False Claims

False claims are eliminated as SMS provides users with immediate reports allowing detailed insight to any situation.

System Limitation

With SMS there is minimal system limitation. Users have the freedom to operate the under groups, online and/or offline and data is backed up automatically.

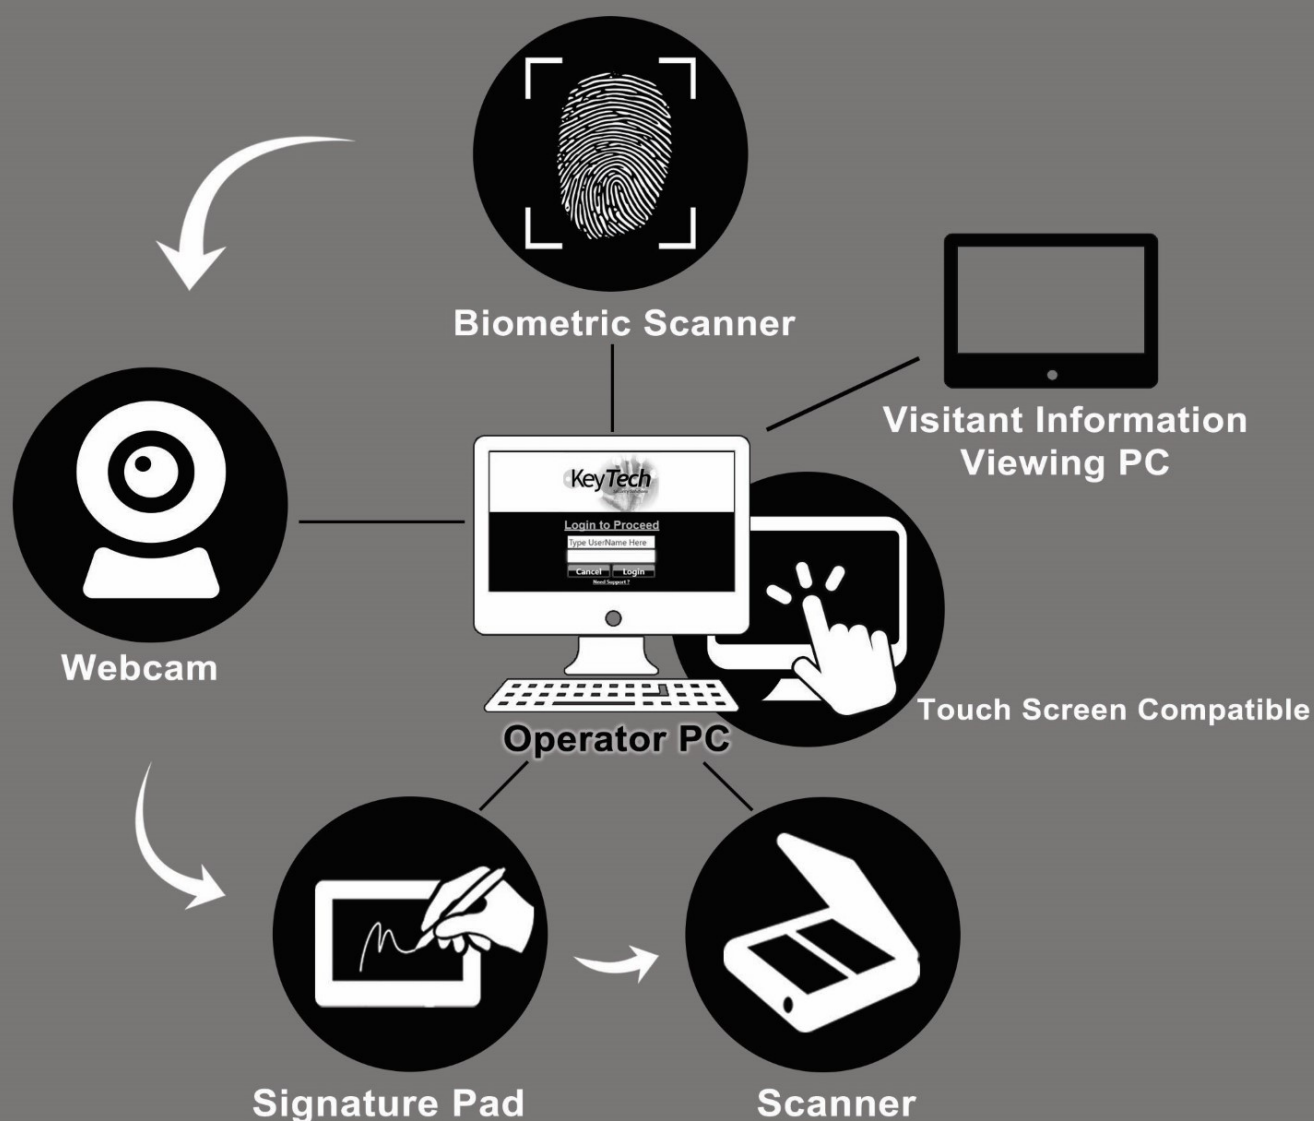

Disorganization

With SMS, the need for manual work and storing of paper documents is eliminated. SMS stores, organizes and presents data in a systematic and thorough fashion.

MAKING TECHNOLOGY & SECURITY WORK TOGETHER

APPLYING THE LATEST TECHNOLOGY

SMS incorporates innovative and unprecedented technology into the systems functions. Effectiveness, efficiency and regulation are maximized through the use of biometrics and touch compatibility. Once logged in through secured fingerprint recognition, users have the ability to operate the system by touch, greatly reducing system processing time. Furthermore, the system utilizes dual monitors, one for guard operators and the other for visitants. Devices such as the biometric scanner, document scanner, signature pad and web camera ensure accurate documentation while eliminating the need for physical paper storage and maximizing system practicality. These devices are optional however are highly recommended to maximize the system's full potential.

SIMPLIFIED CAR PARK MANAGEMENT

KeyTech

➤ AUTOMATIC NUMBER PLATE RECOGNITION

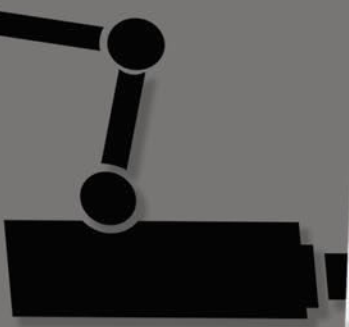

SMS utilizes advanced ANPR technology to fully automate vehicle access and car park management. Once a vehicle approaches the barrier, the camera scans the plate details and relays the data to the system. Permission is instantly granted or denied, depending on the vehicle's current status. Manual vehicle authorization can also be done in the absence of ANPR. The Authorise Vehicle function allows operators to enter details such as names, expiry dates and registration numbers that can give individuals clearance to enter a specified car park location. Subsequently, inquiries to specific vehicles can be made through the Vehicle Search function.

ADVANTAGES OF KEYTECH'S SECURITY MANAGEMENT SOLUTION

KeyTech

➤ MULTI-SOLUTION PLATFORM

With numerous applications, report features and technological features, **SMS** covers the needs of all security organizations and/or government entities. The need to integrate separate software is completely eliminated. Moreover, users will benefit from improved information flow, wide range of capabilities and lower costs.

➤ INTELLIGENT PROCESSING

SMS is based around an intelligent and sophisticated thought process. Security Management Solution follows a structured format and is built on mathematical foundation, ensuring user error and inaccurate inputs are completely eliminated.

➤ MULTI-LINGUAL

Connecting individuals and organizations has never been so manageable. **SMS** allows users to operate the system and receive troubleshooting support in several languages such as English, Arabic, French, Spanish, Russian and German.

➤ BUSINESS COOPERATION

SMS gives users the ability to link branches together and share data within their group. All data is regularly backed up online, with the option of offline back-up, onto a local hard-drive. This allows for improved communications throughout the establishment while increasing efficiency and performance.

➤ ENVIRONMENT FRIENDLY

With **SMS**, the need for cumbersome files, heavy books and disastrous paper records are eliminated. The system utilizes supportive devices such as document scanners, electronic signature pads and web-cameras which remove the need for outdated paper documentation.

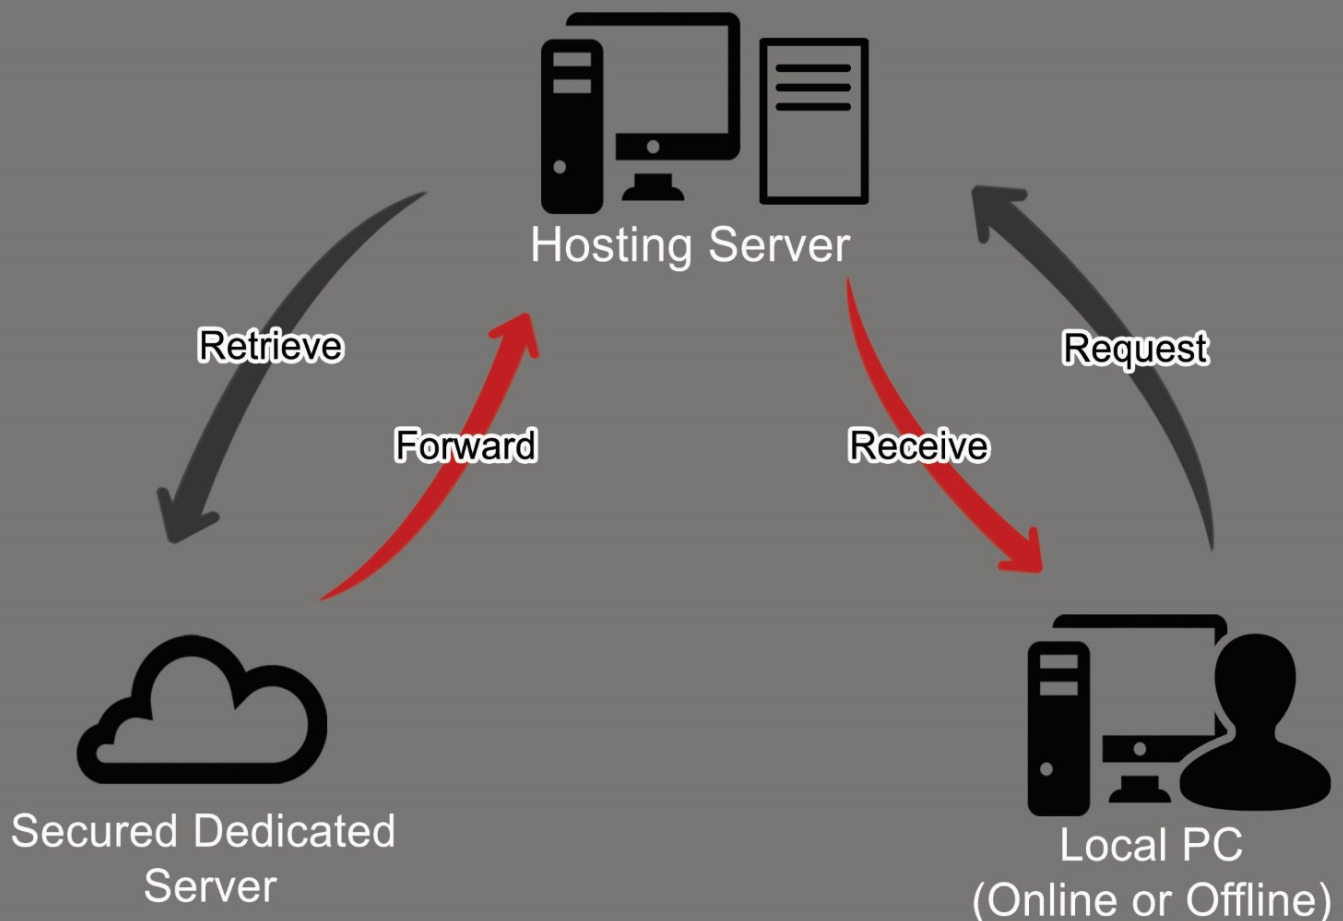

STRUCTURALLY DYNAMIC

SAFE AND SECURE

From start to finish, **SM** delivers absolute advantage through its effectiveness and capability. The system has the ability to be operated online or offline and is securely accessed via username, password and biometric authentication. Furthermore, all data is backed up online through our dedicated servers and/or offline to a local hard-drive. The system can be configured to be used by individual entities, or under large groups where all information and data is shared. All data entries and requests are verified through our dedicated hosting server ensuring maximum stability, security and efficiency. With Security Management Solution, security is met with just the touch of a button.

Security and Authentication Infrastructure

THE SYSTEM'S CONTENT

POWERFUL APPLICATIONS

SM offers powerful and effective application platforms. With the most sophisticated technological functions and controls, the system is easily configured and updated at any time. Containing a vast collection of applications to use, organizations can provide security management solutions for nearly any issue. Security Management Solution offers a number of applications from security operations, screening and sophisticated report functions. The below figures display the applications offered by the system.

VISITOR SCREENING

PERSON OF INTEREST

VISITOR SCREENING

ACCESS MADE EASY

The visitor screening application enables accurate visitor analysis by having visitors go through an intelligent and refined screening procedure. This procedure includes the use of set questions, ID scanning, web camera photo and digital signature. The application guides the system operator during the process and does not allow system tampering or fraudulent data inputs. Information is stored allowing for quick and effortless future visits.

FEATURES

- Automated conditioning of access rights. (Rule-based access control).
- Provide traceability of all visitor activity through backed up data and report functions.
- Integrated with the General Search function, enabling screening for sought out individuals.

KEY REGISTER

↳ INTELLIGENT KEY TRACKING

The key register application efficiently manages all keys within the establishment. The system regulates the issuing of keys to individuals while keeping a detailed track record of any key(s) belonging to the property. Key Register links authorised staff with corresponding keys thus allowing complete security clearance.

FEATURES

- Accurate linkage between individual and specific key.
- Provide alerts for overdue keys.
- Advanced key search function.

OCCUPY

↳ GAIN DETAILED OCCUPANT INFORMATION

The occupy application gathers detailed and critical information regarding the inflow of occupants within the establishment. Each occupant is required to submit necessary documents that correspond with legal and property owner terms, allowing for a precise and fluid move in procedure.

FEATURES

- Documents all necessary data such as occupant age and disabilities for emergency evacuation.
- Easy integration with corporate or property owner information.
- Tenancy agreement expiry reminders.

VACATE

KeyTech

➡ EASILY MANAGE MOVE-OUT OCCUPANTS

The vacate application accurately tracks and manages the outflow of occupants within the property. The application ensures that occupants submit all necessary documents that comply with legal conditions and tenancy agreements. It also ensures that inspection is carefully performed and that no outstanding fee's are due.

FEATURES

- Guarantees occupant move out procedure is carried out correctly through submission of necessary information.
- Document expiry reminders.
- Detailed track record of all children and disabled occupants.

LOST & FOUND

➡ EFFECTIVELY MANAGE LOST ITEMS

The lost and found application accurately manages lost possessions and the return of such possessions to the original owner. Upon discovery of a lost possession, the application allows for detailed information to be gathered for future collection.

FEATURES

- Sophisticated verification features, ensuring all recovered items are returned to the correct party.
- Advanced search functions with extensive functionality.
- Photo and digital signature features allow for even more accurate item retrieval.

PERSON OF INTEREST

↳ SPECIFIC MESSAGE BROADCASTING

The person of interest application combines the power of advanced message broadcasting and targeted case management, enabling users to transmit specific messages to any establishment in mind. The user can target a single establishment or select a group of locations for the message to be broadcasted. The application can be used to convey specific messages with concern for an individual, alert users of critical information or seek out a specific person.

FEATURES

- Enables administration to efficiently share vital information and coordinate efforts. Response to alerts and messages can be done immediately.
- Tamper-proof functionality ensures all messages are logged, documented and can be followed up accordingly.
- Broadcasted messages are undisclosed until the specified individual(s) check in to the establishment.

INSTANT REPORTS

➡ DETAILED DATA VIEWING

The instant report function allows users to view and access up to date information summaries. Users can effortlessly visualize and analyze data of their choice. The user selects the desired subject date and time range as the system presents an immediate presentation of data concerning the selected field.

FEATURES

- Critically explore desired report data, by viewing from a global view of all users, down to individual groups and single databases.
- Online or offline report functionality.
- Multiple columns of desired information.
- Report archiving protects records against alteration.

A PLATFORM FOR SUCCESS

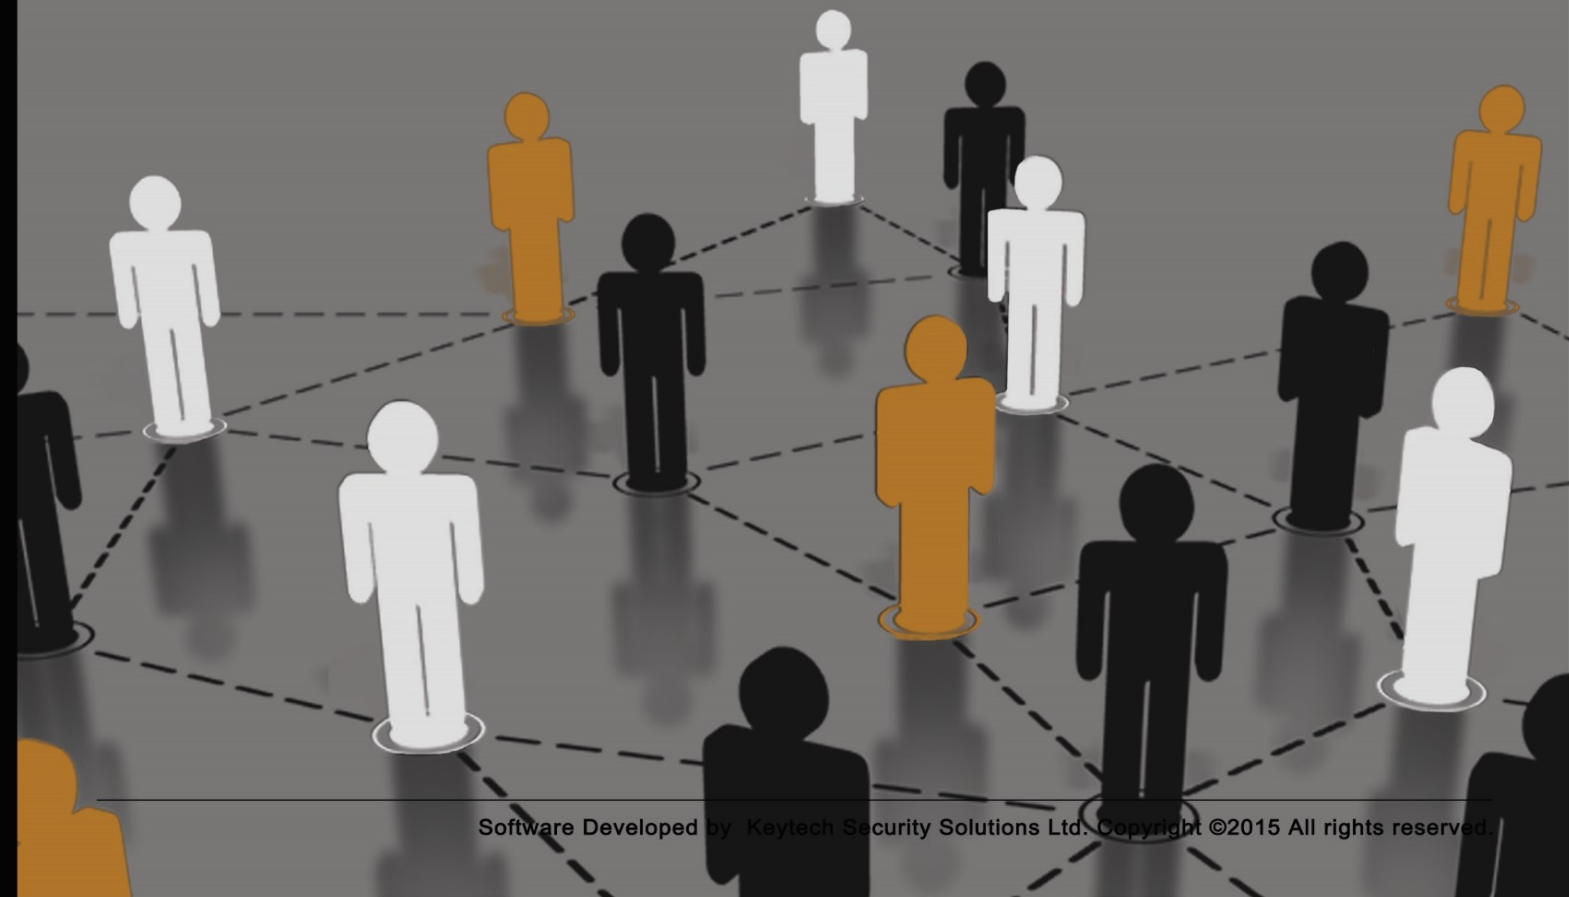

KeyTech

At Keytech Security Solutions, we challenge the security industry's status-quo of living with boundaries. Keytech Security Solutions has built a strong reputation as a powerful leader in the field of exclusive security systems, being the first in the world to create and offer such technology.

With the introduction of our Security Management Solution (**SMS**), we are bringing a global revolution to the security industry. We have created a solution which unifies all security platforms into one powerful and complete model. More specifically, Keytech's Security Management Syolution works in manners which no other security system has ever attempted. ***We welcome you to enjoy the most powerful and sophisticated security management system ever created...***

“Keytech Security promises to deliver absolute satisfaction while establishing a new standard in security systems.”
